

Bringing Physical
Therapy Directly to

ELECTRICAL TEAMS

The Challenge

On-Site Physical Therapy has often been limited, reactive, and hard to scale. Large construction projects and data centers can support dedicated care; electrical contractors with smaller, scattered job-sites face a different challenge:

How do you deliver timely musculoskeletal (MSK) injury prevention and intervention across a region?

Without a trusted, accessible provider, minor aches can go unreported and become recordable injuries, lost-time incidents, workers' compensation claims, and productivity losses.

Our Approach

Early intervention prevents injuries, reduces costs, and keeps employees healthy, productive, and engaged.

Support Between Visits

Injury concerns don't follow a schedule. Employees have direct access to their assigned PT, supported by:

Follow-up calls and emails Coordination with safety and operations teams

When necessary and available, the PT returns onsite for in-person evaluation and support. This continuity keeps care timely, consistent, and appropriate.

ON-SITE SOLUTIONS

The OSSPT Solution

Since 2018, On-Site Solutions Physical Therapy (OSSPT) has brought doctorate-level physical therapists directly to electrical job-sites.

Consistent visits build trust and give workers accessible support for injury prevention, movement optimization, mental health education, and overall wellness education.

We partner with safety leaders, project managers, and operations teams to provide sustainable, cost-effective care for immediate concerns and long-term workforce health.

The Impact

23 Musculoskeletal
(MSK) SAVES

Workers' compensation claims dropped dramatically after OSSPT came onsite in Year 6.

Estimated Cost Avoidance
\$1.08 MILLION

CLIENT SUCCESS STORY

Electrical Contractor

A regional electrical contractor partnered with OSSPT in spring 2018.

The program launched with:

StretchRight: evidence-based stretching tailored to electricians

Project kick-off meetings

Regular onsite PT visits

Leadership and safety teams saw stronger engagement, earlier discomfort reporting, and improved injury prevention. The data reinforced employees' and managers' experience.

Early intervention helped address concerns before they became record-able injuries or claims, avoiding substantial costs and keeping employees healthy and productive.

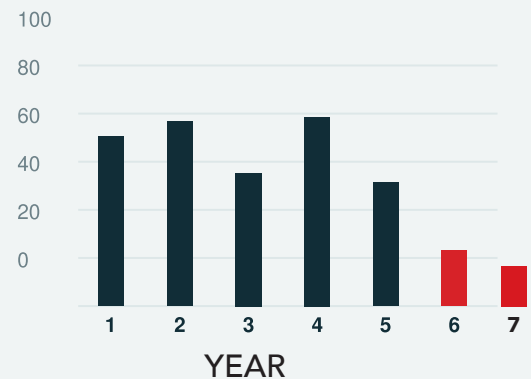

Why OSSPT Works

Our onsite PTs understand electricians' physical demands, work environments, production pressures, and safety expectations. Regular contact builds credibility and trust, making each PT a valued extension of the safety team. That means healthier workers, fewer injuries, lower costs, and stronger project performance.

BOTTOM LINE

Accessible, consistent PT, integrated into job-site culture, helps prevent injuries. OSSPT protects workers, delivers measurable ROI, and creates safer, healthier, more productive job-sites.

REPORTED WORKERS' COMPENSATION CLAIMS

OSSPT on-site:

June of Year 6 and the full Year 7.

Proven Return on Investment

Measurable financial and operational value.

Key Results:

5:1 Average first-year ROI on large construction projects

100% client retention from 2024-2026

Significantly fewer MSK-related injuries and lower associated costs.
